

## CLAIMS

Claims 1 – 20 (previously canceled).

Claims 21 – 36 (canceled).

Claim 37 (currently amended): A method of loading and transporting large game, comprising:

- a) providing a manual large game carrying device ~~of the type~~ comprising an upright rigid frame having a plurality of rotatable wheels mounted there-under, a means for stopping or slowing said plurality of rotatable wheels, a means for steering said manual large game carrying device and a plurality of points of securement structurally attached to a substantially elongated upper receiving bar on said upright rigid frame ~~frame's substantially elongated upper receiving bar~~,
- b) providing a large game carcass having a body cavity and inserting said substantially elongated upper receiving bar of said upright rigid frame of said manual large game carrying device in said large game carcass' body cavity until it rests securely on an ~~the~~ interior spine of said large game carcass' body cavity,
- c) securing said large game carcass to said substantially elongated upper receiving bar of said upright rigid frame of said manual large game carrying device by using a tie down apparatus that secures said large game carcass to said plurality of points of securement structurally attached to said substantially elongated upper receiving bar of said upright rigid frame of said manual large game carrying device, and
- d) raising said manual large game carrying device with said large game carcass ~~now~~ securely attached to said substantially elongated upper receiving bar of said upright rigid frame at said plurality of points of securement with said tie down apparatus on said manual large game carrying device for quick and efficient transport;

~~whereby said manual large game carrying device can be easily loaded, secured, raised,  
and transported.~~

Claim 38 (previously added): The method of claim 37 wherein said upright rigid frame is constructed of a predetermined material.
